

Objective

Extract company website URL from company Wikipedia page.

Script input format

A list of companies Wikipedia pages URLs in *wikipedia_links.csv*

Script output format

wikipedia_answers.csv containing list of tuples (columns): *wikipedia_page_url*, *website_url*.

Implementation

Implement a script that will, for each Wikipedia URL in input file, extract company website URL from appropriate Wikipedia page and export results to *answer.csv*. E.g. for https://en.wikipedia.org/wiki/Apple_Inc. it will extract "www.apple.com". Please also see *wikipedia_answers_examples.csv* attached.

Requirements

Python 3

Testing

Your script would be tested by running the next command:

```
$ python script.py wikipedia_links.csv
```

Delivering format

Your solution should consist of the source code of your program (*script.py* file) uploaded to GitHub. Make sure all project dependencies are listed in *requirements.txt* file.
